Project: Bank Application Description It is a bank application which helps the user to open the account. At firs the user must have registered their details in the bank application. So the applicatiogets the inputs from new user such as Name, Mobile Number, E-mail., after comple of registration process the details directly saved in the database using SQL query whas been execute in the DAO Implementation Class. After that, they have to create own login details like User Name, Password which will be stored in the database. Aff all, When the register next time login into our application it will validate if the deta are correct which was already stored in the database, it will show their Account Det Card number, Pin. So, in this application we are using the basic core java method lift random method, Date function and Constructor and also basic SQL query. Project 2 Project: kids Game Login Page (Front End) Description: It's a kids play game web design UI, they have to enter their name and Age. if the age is more than 14, the UI will show them as "SQRRY!! your are an Adult cannot participate in the game using Alert function. if they are below 14, they will enter int the page like ship game. we are creating the web using HTML marquee tag CSS, Bootstrap and Basic JavaScript Function.
